Contents

Conclusion

Summary of Work

✦ Exploration of Influencing Factors in INVASE

- Training time

- hyperparameter sensitivity

- Effect of baseline model

✦ Propose two policies

- Early stopping policy

- Post-training selection policy

‣ Synthetic dataset A

✦ Exploration of Potential Improvements to INVASE

- Modify Input data structure

- Replace baseline model with critic using unselected features

- Revise loss function

‣ Synthetic dataset A

✦ New IFS method proposal and Analysis

- Propose D-ACES

- Compare with state-of-the-art IFS methods

- Apply to high-dimensional data (syn B)

- Apply to text data (IMDB)

- Analyze limitations
