D-ACES Framework Proposal and Analysis

Conclusion

1. By building on the previous attempts, if any of them demonstrate positive performance, what kind of new competitive framework can be proposed?

(b) How does the newly proposed framework perform on other types of data (e.g., text)?

✦ Syn B (high-dimensional tabular scenario)

✓ Increasing the noisy dimensions has minimal impact on the performance of D-ACES

✦ IMDB (text dataset)

✓ D-ACES effectively selects meaningful tokens to distinguish and explain different emotions.
